PROFESSIONAL PROFILE

Department Manager in Application Development with 10+ years of experience leading software delivery, full-stack engineering, enterprise integrations, production operations, and technical teams. Strong background in Laravel, Vue.js, .NET, REST APIs, MySQL/PostgreSQL, Linux infrastructure, and business-system modernization. Hands-on experience building production AI automation and enterprise identity/security platforms, including multi-agent Telegram assistants, Google Workspace integrations, OCR/vision workflows, electronic-component sourcing, secure ERP question-answering through controlled APIs, and a .NET/Laravel/React Native Active Directory self-service and authentication platform published on the Google Play Store, plus a FastAPI/PostgreSQL LLM chat backend with allowlisted database tools.

CORE EXPERTISE

Leadership & Delivery Department management, project planning, stakeholder management, team leadership, code review, mentoring, risk & change management	AI & Automation OpenClaw, multi-agent LLM systems, Telegram bots, OpenRouter, tool-using agents, prompt engineering, OCR / vision, human-in-the-loop workflows
Full-Stack Engineering Laravel, PHP, .NET, Python, FastAPI, Vue.js, React Native, JavaScript ES6+, Vuetify, REST APIs, MySQL, PostgreSQL, Vite, Composer, NPM	Infrastructure & DevOps Docker, Docker Compose, Linux VPS, Windows Server, Git/GitHub, production deployment, DNS, SSL/TLS, server troubleshooting, operational runbooks
Google & Integrations Google Workspace APIs, Gmail, Calendar, Drive, OAuth, Google Maps, GPS, email/SMS integrations, third-party REST APIs	Identity, Security & Operations Active Directory account management, OTP-based authentication, API design & access control, authentication/authorization, application performance, database optimization, production support, documentation

PROFESSIONAL EXPERIENCE

C.P. Bangladesh Co. Ltd. | Department Manager - Application Development

2018 - Present | Bangladesh

- Lead the Application Development function, translating business requirements into scalable software solutions and setting priorities across enterprise application initiatives.
- Manage project planning, resource allocation, delivery tracking, stakeholder communication, technical risk, and change management across development activities.
- Architect and oversee full-stack applications using Laravel, Vue.js, JavaScript, .NET, REST APIs, MySQL, and PostgreSQL, with emphasis on maintainability, security, and performance.
- Conduct code reviews, mentor developers, standardize engineering practices, and guide troubleshooting for complex application, integration, database, and deployment issues.
- Integrate business systems with Google services, mapping/GPS platforms, email/SMS services, mobile applications, social platforms, and third-party APIs.
- Support production deployments and operational reliability across Linux/Windows server environments, including DNS, SSL/TLS, access control, monitoring, and technical documentation.
- Drive adoption of AI-assisted workflows and agent-based automation to improve productivity, information access, and internal service delivery.

AI & AUTOMATION LEADERSHIP

OpenClaw Agent - Multi-Agent Telegram AI Platform

Production AI platform | Docker / Linux VPS / Telegram / Google Workspace / OpenRouter

- Designed and operate a production multi-agent OpenClaw stack with seven specialized Telegram bots for email, calendar/Drive, electronic-component sourcing, writing, OCR/vision, and read-only ERP Q&A, deployed on a Linux VPS via Docker Compose with centralized gateway routing, per-bot bindings, and controlled agent access.
- Implemented Gmail, Calendar, and Drive assistants using OAuth-based Google Workspace tooling, with read-first behavior, draft preview, and explicit user confirmation before sending email.
- Built an electronic-component Web Sourcing Bot with approved-site search, fallback discovery, and mobile-friendly price/stock results for manufacturer part numbers (MPNs).
- Added OCR/vision workflows for image-to-text extraction and EN<->Bangla use cases, including model fallback for reliability, plus a writing agent for replies, rewrites, and translation.
- Integrated read-only ERP Q&A through a controlled chatbot REST API for stock, RFQs, orders, and invoices, preventing direct LLM access to the production database.

- Created operational runbooks for health checks, bot pairing, Gmail/OAuth, OpenRouter authentication, access control, and production troubleshooting.

CPB AI Service — FastAPI Backend (Capstone)

Python 3.14, FastAPI, PostgreSQL, OpenRouter/OpenAI, JWT, pytest

- Built a FastAPI chat service behind Laravel that answers Postgres questions through allowlisted Python tools, so the LLM never executes SQL.
- Designed a provider port for OpenRouter, OpenAI, and mock completions, keeping vendor SDKs out of the chat service and HTTP routes.
- Enforced API-key and JWT authentication with role-based tool access; viewers can chat but cannot list, preview, or count tables.
- Added a bounded tool loop (default 5 rounds) with table allowlists, argument validation, and a JSON tool trace; persisted conversations and audit events in PostgreSQL without logging prompts or secrets.
- Covered the Laravel HTTP contract with pytest plus a small eval set for tool choice and secret refusal.

ENTERPRISE IDENTITY & ACCESS MANAGEMENT

Active Directory Self-Service & Authentication Platform

Production enterprise platform | .NET / WPF / Laravel / Vue / React Native / Active Directory

- Designed and built a production Active Directory self-service and authentication platform combining a .NET internal API layer, a WPF desktop app, a Laravel + Vue web portal, and a React Native mobile app — the mobile app is published live on the Google Play Store.
- Engineered a secure .NET bridge between Laravel and Active Directory, enabling account status checks, password changes, and OTP-verified password resets and account unlocks without exposing AD credentials to the web layer.
- Implemented end-to-end OTP verification workflows with password/OTP redaction in logs and dynamic internal API key management to harden the authentication surface.
- Added smart login-failure diagnostics, domain controller failover and timeout handling, and rate limiting to improve reliability of authentication flows under production load.
- Built centralized audit logging and a modernized WPF dashboard for IT administrators, alongside mobile and WebView-ready self-service flows for end users.
- Delivered production-grade error handling and compact, step-based UX across desktop, web, and mobile touchpoints, reducing manual IT helpdesk intervention for common AD account issues.

SELECTED ENTERPRISE PROJECTS

C.P. Bangladesh Corporate & Recruitment Platform | cpbangladesh.com/

Multilingual corporate and recruitment platform with recruitment workflows, dynamic content, and SMS/email integration.

Technology: Laravel, Vue.js, Vuetify, Bootstrap, MySQL

IT Portal - Enterprise Application Platform | it.cpbangladesh.com/

Enterprise portal with 25+ internal applications: carpool/GPS tracking, inventory and automated reporting, network monitoring, ticket/access management, and Power BI integration.

Technology: Laravel, Vue.js, REST APIs, MySQL, PostgreSQL, Google Maps, GPS, Power BI

CP Five Star POS | fs.cpbfivestar.com/

B2B/B2C POS and business-management platform covering sales, orders, stock, profit/loss reporting, and SMS notifications.

Technology: Laravel, Vue.js, Vuetify, MySQL, PostgreSQL

CP Five Star | cpbfivestar.com/

Food-product and franchise platform with dynamic product management, customer communication, and Google Maps-based franchise locations.

Technology: Laravel, Vue.js, Vuetify, MySQL, Google Maps

TECHNICAL SKILLS

AI / LLM: OpenClaw, Multi-Agent LLM, Telegram Bots, OpenRouter, Tool Use, LLM Tool Calling, Prompt Engineering, OCR / Vision Models, Model Fallback

Backend: Laravel, PHP, .NET, Python, FastAPI, Pydantic, asyncpg, HTTPX, OpenAPI, RESTful APIs, MySQL, PostgreSQL, Authentication / Authorization, Composer, pytest, Ruff

Frontend: Vue.js, JavaScript ES6+, Vuex, HTML5, CSS3 / SASS / SCSS, Vuetify, Bootstrap, Vite, Webpack, WPF

Mobile: React Native, Mobile Self-Service Apps, Google Play Store Publishing, Mobile WebView Integration

Identity & Access Management: Active Directory, JWT, RBAC, OTP Verification, API Key Management, Audit Logging, Rate Limiting, Domain Controller Failover

DevOps / Systems: Docker, Docker Compose, Linux VPS, Windows Server, Git, GitHub, NPM, DNS, SSL/TLS, Production Deployment, Server Troubleshooting

APIs / Services: Google Workspace APIs, Gmail API, Calendar API, Drive API, OAuth, Google Maps, GPS, Email/SMS, Third-Party APIs

EDUCATION

Master's in Information Technology

Institute of Information Technology (IIT), Jahangirnagar University, Dhaka | CGPA: 3.60 / 4.00

Bachelor of Science in Computer Science

North Western University, Khulna | CGPA: 3.82 / 4.00

Languages: Bangla (Native) | English (Professional Working Proficiency)
